

GOPINATH S

QUALITY ANALYST

Chennai, India • +91-XXXXXXXXXX • gopinathqa01@gmail.com • linkedin.com/in/gopinath-s006a681a0

PROFESSIONAL SUMMARY

QA Professional with over 3 years of experience in Functional, Regression, and API Testing across hospitality, e-commerce, and consumer robotics domains. Skilled in leveraging AI tools such as Claude, Microsoft 365 Copilot, and ChatGPT to accelerate requirement analysis, test scenario design, and automation framework development using Playwright and TypeScript. Track record of identifying 350+ bugs across multiple release cycles while maintaining high test coverage and reducing manual effort. Experienced in cross-functional collaboration with BA, Development, and IT teams to ensure quality, on-time production releases.

TECHNICAL SKILLS

AI Tools: Claude, ChatGPT, Microsoft 365 Copilot, Amazon Q, Amazon Nova

Automation & Frameworks: Playwright, TypeScript, Pytest, Python (Basics), SQL (Basics)

Testing Skills: Manual Testing, Automation Testing, API Testing, KPI Testing, Cross-Browser Testing, Device Compatibility Testing, Log Analysis & Debugging, Bug Triaging & Reporting

Test Management Tools: JIRA, GitHub, Azure DevOps, TestRail

Technical Tools: Visual Studio Code, LoadRunner, JMeter, Postman, Bruno

Monitoring & Deployment: CloudWatch, Athena, Azure Monitor, Kibana, Azure DevOps, Rancher

Domain Knowledge: Hospitality Management Systems, Property Management Systems (PMS), Amazon Alexa Devices, Consumer Robotics, Web & Mobile Booking Applications, Sponsored Ads (Video, Audio, Recommendation)

Collaboration Tools: Slack, Chime, Microsoft Teams, WorkMail

Soft Skills: Cross-Team Collaboration, Decision-Making, Problem-Solving, Time Management, Adaptability

EXPERIENCE

Quality Analyst

10/2025 – Current

Agilysys – Chennai, India

- Worked on the Agilysys Book project within the Agilysys Hospitality Management System domain.
- Configured and set up Agilysys product solutions tailored to client requirements.
- Performed functional, regression, automation, and user acceptance testing (UAT) for Agilysys products.
- Integrated Agilysys Book with other Property Management Systems, including Spa, Golf, Rooms, Engage, Gift Card, and the Reserve suite.
- Identified 200+ bugs within 6 months, including 12+ blocker-level defects, contributing to consistently improving release quality.
- Built an AI-powered automation framework for the Agilysys Golf product and API testing for the Engage product using Playwright with TypeScript, leveraging AI Copilot and Claude to accelerate regression coverage.
- Participated in multiple release cycles, successfully onboarding major feature enhancements to production.
- Implemented AI tools and workflows across the daily testing lifecycle, applying knowledge from internal AI training sessions.
- Collaborated closely with cross-product teams, including integrated product, BA, Development, and IT teams, to ensure successful implementation and maintenance of Agilysys solutions.

Testing Engineer

10/2023 – 10/2025 (2 Years)

Amazon – Chennai, India

Testing Associate – Alexa Project

- Worked on Alexa Advertisements (Juno Ads) within the Alexa Non-Comms Org under Amazon Devices.
- Led testing of 10+ ad categories across 40+ Alexa device types, mobile apps, and Amazon web applications.
- Conducted functional, performance, and UI testing to validate ad user experience.
- Identified and resolved 60+ critical bugs, including 15+ blocker-level defects.

- Enhanced team collaboration using Agile and Scrum methodologies.
- Conducted business requirement analysis, ensured regulatory compliance, and applied risk mitigation strategies while collaborating cross-functionally.

Quality Services Associate – CoRo Project

- Contributed to the Consumer Robotics (CoRo) project under the Quality Services team.
- Contributed 25–30% of overall testing effort across several build releases.
- Identified and resolved 90+ bugs in a year, including 25+ blocker-level defects.
- Owned Robot Automation tasks, executing Python scripts and performing log analysis.
- Played a key role in critical patch build validation across 5+ releases and was recognized for successful completion.
- Conducted business requirement analysis, ensured regulatory compliance, and applied risk mitigation strategies while collaborating cross-functionally.

Programmer Analyst Trainee

05/2023 – 08/2023 (4 Months)

Cognizant – Chennai, India

- Gained hands-on training in performance testing using LoadRunner and JMeter.
- Conducted functional, non-functional, load, stress, and endurance testing on web applications.
- Implemented efficient processes for collecting, analyzing, and reporting test results.

EDUCATION

M.Tech: Cloud Computing & Blockchain

06/2024 – 05/2026

SRM Institute of Science and Technology – Chennai, India | CGPA: 8.60

B.Tech: Information Technology

09/2019 – 04/2023

RMD Engineering College – Chennai, India | CGPA: 8.74

Higher Secondary School (+2): Computer Science

04/2019

Tagore Matriculation Hr. Sec. School – Salem, India | 85.6%

CERTIFICATIONS

- Gen AI & AI Agents for QA Automation using Copilot & Claude – Udemy
- Postman API Testing Essentials – LinkedIn Learning
- AWS Educate: Introduction to Cloud 101 – AWS
- Google Ads Display Certification – Google Digital Academy
- Sponsored Ads Advanced Certification – Amazon Ads Academy
- Artificial Intelligence in Python – Internship, UNIQ Technologies
- The Joy of Computing using Python – NPTEL
- KPIT NOVA Hiring Hackathon 2022 – KPIT Technologies Ltd.

PROJECTS

Blockchain-Based Counterfeit Product Verification System using Ethereum

M.Tech, Cloud Computing & Blockchain – SRM Institute of Science and Technology

Built a web application with an Ethereum smart contract (Solidity) to store product hashes, using SHA-256 for secure product identification, Web3.py to connect the backend to the blockchain, and QR-code-based verification for consumers, ensuring tamper-proof and transparent product authentication.

- Used AI tools to design the system architecture and workflow, generate Flask backend code and smart contract logic, and assist with debugging and security improvements.

Face Recognition-Based Attendance System using Artificial Intelligence

B.Tech, Information Technology – RMD Engineering College

Built an AI-based attendance system in Python that automates attendance marking through real-time facial recognition, storing employee/student details and verifying faces against records to mark attendance automatically and trigger daily reports for review.

- Implemented OpenCV for face detection and image processing, used NumPy and Pandas for data handling and record management, and visualized attendance insights using Matplotlib.

AWARDS

- Spot Award (2024) – Exemplary Performance, CoRo, Amazon
- Extra Mile Award (2024) – Task Ownership & Completion, CoRo, Amazon
- Raising the Bar Award (2024) – Outstanding Contribution, Alexa, Amazon
- Accolades Award (2024) – Delivering Results in Critical Testing, CoRo, Amazon
- Runner-Up (2023) – College Project Competition, RMD Engineering College
